## Trade Category Classification Form

As we move into 2017, the ECA is seeking to improve the searchability of both our online and print Membership Directories. Member feedback has told us that ECA Directories would be more valuable if they included a method to search companies by scope, as well as by name. With this in mind, ECA staff are asking each member firm to fill out this important Trade Category Classification Form. This form has been created with input from industry and includes both approved Masterformat Divisions and standard Trade Definition scopes. Once your company information is gathered, this information will be added to our Online Membership Directory to ensure that your firm is more visible to potential business partners or clients - allowing your business to grow.

**To complete the form, simply click all boxes that apply to your company. Once complete, please click "Submit" at the end of the form.** Your results will then be compiled by ECA staff and published in our Online Directory at [www.edmca.com](http://www.edmca.com) in 2017. These scopes will then be added to subsequent print directories beginning in 2018.

\* Please note, by associating your company with the divisional numbering system, you are contributing to improved project documentation and communication, and providing the ECA Trade Definitions Committee with valuable feedback on the nature of construction business in Alberta and across Canada. The Alberta Construction Trade Definitions are a critical component to identifying work during the bidding and tendering phase of projects. The Trade Definitions are regularly updated through contributions of the membership and feedback we receive from the trades, meaning that the list of inclusions and exclusions within any single Trade Definition is as accurate as possible.

The Trade Definitions Committee is expanding the user interface, to make it easier for professional designers (architects and engineers) to identify specification content by work results and elemental descriptions. The outcome of this additional content will mean that project specifications are better coordinated with the work of the Trade Definitions, meaning that it should be easier to identify work associated with individual trades. The information will also be used to identify areas where scope-of-work described in Trade Definitions overlap, or where components of work are not described so as to make assigning trades associated with those scope-gaps easier to define for the General Contractor, Construction Manager and Design Builder members of the association.

The Divisional numbering system is based on the latest version of MasterFormat - if you are not sure where your work is placed, please feel free to search a the MasterFormat Numbers and Titles listing located at [edmca.com/membership](http://edmca.com/membership) or contact [matt.schellenberger@edmca.com](mailto:matt.schellenberger@edmca.com) where you are unsure about where your trade work belongs.

Thank you for your input and working to improve our Member Directory.
